# ONE TOUGH TRUCK

## WILDLAND

URBAN INTERFACE AND DISASTOR RESPONSE APPARATUS

**WUI 4x4 Pump & Roll Tactical Water Tender - 2000 I.G.**  
Lak'Was Wildfire Water Service

### WHY FORT GARRY FIRE TRUCKS?

Our custom-built wildland-urban interface (WUI) apparatus are designed to combat wildfires and are equipped to navigate rough terrain and provide fire fighting support in areas where traditional fire apparatus have difficulty reaching. Our Range Trucks, MXV Terminator and Wildland units offer a range of customization options, allowing fire departments to configure their WUI rigs to suit their specific needs and operational requirements.

Tla'Amin Fire Rescue*

**BUILT TO WITHSTAND THE HARSHTEST TERRAIN.**

Our Range Trucks and the WUI Apparatus are dedicated off-road, initial attack vehicles built on heavy-duty chassis. The strength of these apparatus is the ability for 4x4 pump & roll with large water capacity and foam / CAFS systems that maximize their effectiveness while giving them the ability to quickly relocate with light booster reel lines and monitors. With 4x4 pump & roll, the apparatus is capable of moving along roads and fire breaks or accessing remote water supplies for water shuttling / supply. Protection from fire ground hot spots is provided with underbody nozzles.

**WUI WARRIORS: BUILT FOR THE TOUGHEST FRONTLINES.**

For apparatus with secondary roles for high WUI threat, our MXV Terminator and FireWalker apparatus offer high-side pumper bodies for storage of both structure fire fighting and WUI equipment. These apparatus are designed with increased angles of approach and departure, underbody nozzles, booster reels, dump-chutes, pump & roll, and front bumper monitors for effective WUI and structure fire fighting.

Our Tracked Vehicles (photos-right) are purpose-built machines that combine off-road agility with fire fighting capabilities, designed not just for conventional fire suppression, but for hauling cargo and supplies. The front blade or towed rake creates fire breaks or is used in diking operations for flood ops or hazmat, they truly are versatile.
